

# Fix and forecast productivity using today's imperfect data with predictive machine learning.

Mine Performance Navigator (MPN) is an industry game changer. Powered by a cutting-edge deep learning model, MPN provides accurate forecasts and answers to your pressing questions. It's your dependable partner in optimising productivity and ensuring your mine runs like clockwork.

With automated updates, self-training, and real-time insights, MPN makes monitoring of mining sites easier. With MPN, you'll stay on track, meet your targets, and exceed your expectations.

## With MPN, you can:

### Leverage advanced predictive power

MPN employs advanced deep learning models for accurate, up-to-date predictions, self-training every week to adapt to evolving trends and improve forecasts.

### Rely on data-driven precision

Models are tuned to your unique operational activities by incorporating PLOD data, such as tonnes per load, distance per load, and number of trucks per shift.

### Relax with effortless updates

With automatic daily updates, MPN always has the latest insights, saving you time and energy.

### Keep on track with goal alignment

Easily compare new forecasts to your 3MS targets for the quarter, ensuring that your operations are always on track.
